The following article is a guide to using AutoCAD as a 2D drafting tool. For the beginner, this article will walk you through a basic 2D draft and will discuss some of the more advanced features that AutoCAD offers. This article is not intended to help you master AutoCAD, but to provide a basic understanding of how to use the features available in the software. You can read the full article in PDF format. How to Use AutoCAD To open a new AutoCAD drawing, click File > New > 2D Drawing and choose the drawing type from the drop-down menu. You will need to create a 2D drawing of at least 200 dpi for best results in the drafting room. Create a new drawing with the correct settings and click OK. With a new drawing open in AutoCAD, the first step is to sketch the subject and click on the sketch button. For an overview of how to use sketching tools, refer to the sketching guide. Next, the screen will display the sketch window as seen in the following illustration. To add a component to the sketch, click the Add Component button and choose the component to add from the menu. You can add any AutoCAD component to the sketch. In the following example, a line component is added. Once a component is added, the sketch will change color based on the component type, as illustrated in the following example. In the current example, a line is added. Once a component has been added to the sketch, you can rotate the sketch by clicking the rotate box and dragging the mouse. Once the sketch is rotated, the cursor will change to an arrow and the drawing will be ready to draw or mark. Click on the arrow to rotate the sketch back. To save the sketch, click the save icon. The next step is to create a line and click on the straight line button. Once a line is created, you can mark a line by clicking the straight line icon. By holding the shift key, you can mark multiple points and clicking again will move the points you marked on the line. You can also create a radius (small or large) by clicking on the right circle button. To add a closed shape, use the shape button and select the shape type from the menu. You can close the shape by using the Close button. You can also use the top shape button to select the existing shape. Once

NAIROBI, Kenya -- The Kenyan government has told the country's residents to prepare for a third wave of deadly attacks after a spate of similar incidents in recent months. The warning came on Sunday from Interior Cabinet Secretary Joseph Ole Lenku, who said the government is working to prevent the continued spread of violent extremism. "We are concerned about the events that have taken place in recent weeks in Kenya and we are working with local security agencies to prevent a repeat of these events," Lenku said in a statement. "We urge Kenyans to remain calm and vigilant as we go about our daily business." Get Breaking News Delivered to Your Inbox Kenya has been hit by a spate of deadly attacks, including four al-Shabab-linked terror attacks in the coastal city of Mombasa earlier this year. The government has

blamed the attacks on al-Shabab, an al-Qaida-linked terror group based in neighboring Somalia. Over the past year, a nationwide state of emergency was declared in Kenya and several rounds of military operations were launched against suspected militants.

However, violence has continued, including a deadly attack on a mosque in West Pokot that left at least 22 people dead and dozens wounded on Christmas Day. In September, police said a team of suicide bombers had attacked a checkpoint in the western town of Mandera, killing at least 11 people. Three days later, a group of gunmen stormed a government office in Mandera, killing four people. In the run-up to the country's August 2017 general election, al-Shabab claimed responsibility for deadly attacks in Kenya. Separation a1d647c40b
