For more info visit : You can choose to keep the downloaded file or delete it in "My Computer > properties > appwiz.cpl" (If it does not exist there yet, it will be created)

A: I am assuming that you already know your mime-type. You should test this type of thing with specific mime types. For example, one quick test would be to include mime-types.php in your directory (usually in the WEBROOT) and do a var\_dump() on

mimety 82138339de
