Autodesk was founded by Jack McKinney and John Walker in 1969 as a division of Scott Chemical Company in Provo, Utah. Originally, Scott Chemical was a firm that produced fine leather goods and men's clothing. Scott Chemical built a chemical test laboratory for precision testing in its plant. After a botched fireproofing job at the lab, the company came up with the idea to produce a database for fire-protective materials using a computer, and to the best of my knowledge, there were only a few computers (in the early '60s) that could run software. As a matter of fact, Scott Chemical was one of the first companies in the United States to use the computer to make their products. The next step for Scott Chemical was to sell the company and it became known as Graphic Sciences Corporation. To run their own computer software, Graphic Sciences bought and customized a PDP-11. The PDP-11 they bought was a small computer with only 50-100 KB of memory (roughly one Mbyte). It was not until the end of the 1970s, when personal computers started to become affordable, that the PDP-11 became obsolete. By 1979, Graphic Sciences Corporation had become the leading supplier of computer aided design (CAD) software for the architectural, engineering and manufacturing industries. That year, Graphic Sciences Corporation changed its name to Autodesk, Inc. The founders of Autodesk include John Walker, Jack McKinney, Jack Johnson, James Atkins, and Wesley Johnson. Before Autodesk, there was a software called DWGInfo, which was created by Graphic Sciences Corporation. AutoCAD, which ran on the PDP-11, was a new program and created a huge buzz among architectural and engineering firms. At that time, only a handful of companies in the United States and around the world sold CAD software and AutoCAD was one of them. The first copies of AutoCAD sold for \$750. They shipped on PDP-11 minicomputers and the original software was 12 Mbytes, roughly 2,000 times bigger than the memory capacity of the PDP-11. If you look at the Autodesk corporate history on the web, you'll see that Autodesk has hired some famous designers and architects. I remember talking to John Walker at the AIA Midwinter Conference in 2011 and he told me that one of the ways to build a successful business is to hire people who have great taste. The

AutoCAD LT AutoCAD LT (Advanced Drawing Tools) is a computerized drafting system designed specifically for use by small and medium-sized enterprises. It includes functions for managing drawings, calculations and the like, while it also includes specialized tools for the management of a drawing set and of the drawing process. The AutoCAD LT platform includes the following major categories of applications: A-level A-level is a feature-rich set of tools for viewing, manipulating, modifying, and sharing drawings created by AutoCAD. A-level also includes the A-level Application Environment (ALE), which is an administrative and document management application for AutoCAD LT. ALM ALM (Arts and Letters Management) is a feature-rich set of tools for viewing, manipulating, and sharing drawings created by AutoCAD. ALM also includes the ALM Application Environment (ALE), which is an administrative and document management application for AutoCAD LT. AEC The AEC (Architecture Engineering and Construction) applications are specialized versions of the same drafting tools and functions as found in the main A-level package. The AEC suite includes the following applications: AutoCAD Architecture AutoCAD Architecture is an AutoCAD-based application that automates architectural and engineering design. It includes architectural design and management tools, including 3D visualization, construction design and management tools, such as quantity takeoff and BIM (Building Information Modeling), and a suite of architectural renderings. AutoCAD Civil 3D AutoCAD Civil 3D is a module of AutoCAD that gives architects and building and civil engineers the ability to create detailed, 3D architectural models. AutoCAD Electrical AutoCAD Electrical is a module of AutoCAD that provides architects, mechanical and electrical engineers with the ability to create detailed, 3D architectural models of electrical distribution and telecommunications systems. AutoCAD MEP AutoCAD MEP is a module of AutoCAD that provides mechanical and electrical engineers with the ability to create detailed, 3D architectural models of MEP systems (mechanical, electrical, plumbing, fire, gas and refrigeration) for buildings. AutoCAD PipeFIT AutoCAD PipeFIT is a module of AutoCAD that provides civil and mechanical engineers with the ability to create detailed, 3D architectural models of piping systems for buildings. Should Andrew Beal be the next head coach of the Calgary Flames? With the team just one point out of a playoff spot, they need a coach they can trust, a coach that can build a team while riding that wave of euphoria to the playoffs. I'm assuming the Flames already tried to replace Glen Gulutzan as head coach, and that it didn't go as well as they might have hoped. It's time for someone who can successfully build a consistent top-five team into a top-three team, and that's something we're likely to see this year. Beal is a good coach, and the next step on his path to the NHL may have just been lined up. In the last two seasons of AHL life, he's built a group of AHL all-stars in a successful rebuilding phase. His teams have had some key components, like the above clip of Nathan McKinnon that we saw at the 2013 NHL Draft Combine. There's more to his resume than that, but I'll leave that up for the Flames. Let's look at what Beal has achieved in the AHL.

What's New in the AutoCAD?

Protection from errant and accidental clicks: Eliminate accidental clicks by protecting the insertion point, even when it is at the edge of the screen. This is achieved by changing the mouse cursor to a darker color, which is invisible on the drawing.

In this week's round-up of Ask the Experts, I'll give an overview of the major changes in the upcoming AutoCAD releases and discuss the emerging technologies for future releases.

Upcoming Releases

The upcoming AutoCAD releases are summarized below. Note that dates are subject to change and that the release schedule is a best guess based on feedback from AutoCAD release teams and available resources.

AutoCAD 2020

The release of AutoCAD 2020 will happen around the end of April, and we plan to support beta versions of the 2020 release beginning April 8th. We will also have AutoCAD 2020 available in open beta testing prior to the final release. Please note that we have not decided on the final release date of AutoCAD 2023 yet, but it is likely to happen around the end of April, or after AutoCAD 2023 is released.

Technology for Future Releases

In previous decades, the AutoCAD release schedule was planned based on industry releases. In this decade, we are using open and closed beta testing, which allow for greater testing of code and functional changes in production. Beta testing of code and functional changes is still much slower than a release, so we need to reserve time for testing that will not affect customers in production. We are also experimenting with rapid technology releases. In the past, we released major AutoCAD products every three years, which gave us time for stable versions, customer feedback and industry releases. In this decade, we have taken less time between releases, and this is a key driver in the
