Electroporation and Fluorescence Microscopy {#sec3.1} -- The caveolae of Balb/c-2T3 cells were transfected with EcN-Sj26GST-RFP plasmid. The pelleted cells after osmotic shock were re-suspended in an electroporation buffer containing 1× PBS and transfected using an electroporator, which was set at a program of +10 V, 5 ms, and 14 V, 50 ms, as previously described \[[@B39], [@B40]\]. The cells were then allowed to settle for 10 min, washed with 1× PBS, fixed in cold methanol for 5 min, and then stained with DAPI. EcN-Sj26GST-RFP fluorescence was visualized by fluorescence microscopy (Carl Zeiss, Germany). 3.2. SDS-PAGE and Western Blot Analysis {#sec3.2} --------------------------------------- SDS-PAGE was used to analyze the band pattern of proteins in whole cell lysates obtained by scraping the cells. The samples were solubilized in SDS sample loading buffer, treated with 1 mM phenylmethanesulfonyl fluoride (PMSF), separated on 12% polyacrylamide gels, and then electrophoretically transferred to a nitrocellulose membrane (Bio-Rad, USA). After being blocked for 2 hours in 5% skimmed milk powder in TBST, the nitrocellulose was incubated overnight at 4°C with the primary antibody of interest. The anti-RFP antibody was purchased from Chromotek (Göttingen, Germany) and used at a 1 : 500 dilution. The antibodies against caveolin-1, c-Src, and phosphorylated caveolin-1 were obtained from Cell Signaling Technology (USA) and used at a 1 : 1000 dilution
