I want to write a script in python to print the following text and also print the matching line # and text (if any) of the next line.
PS C:\Users\ABC>copy str4.txt str5.txt PS C:\Users\ABC>type str5.txt This is A Line of Text PS C:\Users\ABC>type str4.txt
This is Another Line of Text PS C:\Users\ABC> Need to get the following output. PS C:\Users\ABC>copy str4.txt str5.txt PS
C:\Users\ABC>type str5.txt This is A Line of Text This is Another Line of Text PS C:\Users\ABC>type str4.txt This is A Line
of Text Another Line of Text PS C:\Users\ABC> Any suggestion will be helpful. A: It looks like you have a file of lines and
want to print the lines that are not in the file you've just read. A common method of doing this is to read all lines in the file, then
to perform a search operation to find out if any of the lines are also lines in the file you've just read. If any of them are, print
them. You may as well keep track of whether you have printed the lines in the file and if so print them again to make sure you
don't print the same thing twice. Here's some code to do this: import sys with open(sys.argv[1],'r') as f: lines = [x.rstrip() for x in
f] print(lines) num_printed = 0 not_in_file = False for line in lines: if not line in f: if num_printed == 0: print(line)
