Apps and plug-ins use the features and functions of AutoCAD to accomplish specific tasks that can also be accomplished in a stand-alone software program. The AutoCAD 2008 Service Pack 1 (SP1) adds the ability to draw by using a mouse and other improvements. An Application Programming Interface (API) is a specification that allows programs to access, modify, and exchange data. The API supports the common features and functions of applications. The API is used when programming custom AutoCAD extensions. Using the API allows AutoCAD to change the behavior of applications without requiring a new version of AutoCAD. AutoCAD has a rich set of tools for the creation of markup (comment and annotation) and the direct creation of graphic objects such as lines, splines, polylines, points, circles, ellipses, arcs, rectangles, polyhedrons, and surfaces. Object types can be edited and displayed in various ways. For example, you can use the direct tool to change the 3D appearance of an object, you can drag an object onto another object, you can group objects together and then define the appearance and dimensions of the group, or you can apply a tag to an object, and then find that object in a later session. AutoCAD has a number of drawing tools, such as drawing styles, which can be used to format, style, and apply special effects to drawings. You can also import files in various formats to a drawing, and save that drawing as a file in another format. Once a drawing has been created, it can be exported in several different formats, for example, DXF, PDF, or DWF. There are also tools to manage, customize, and display annotations and comments. Raster to vector conversion Raster to vector conversion enables a user to take raster files (bitmaps) and import them into AutoCAD for edit and display in 2D. These image-based drawings can be compared to those with traditional vector objects. Raster to vector conversion (often abbreviated as raster to vector or r2v) is the automatic conversion of raster images (bitmaps) to vectors. Raster images are widely used in computer graphics and computer graphics

industry. The main advantage of raster to vector conversion is that it can convert multiple raster images into one vector image. It can also directly convert to a scalable format of vector-graphics, such as DXF, PDF, etc. Tools to help text a1d647c40b
