The file format supported is the AutoCAD native file format, DXF, and the DWG and DGN formats are also supported. The DXF, DGN, DWG, and DGN formats are supported by the "Import Drawing" dialog box, the "Export Drawing" dialog box, and a "Drawing Template Editor" utility. DXF DXF (Drawing Interchange Format) is the native file format of AutoCAD, and is also used to define the specification of file formats and other information required to exchange drawings. DXF and other binary files can be exchanged between AutoCAD and other software, and if an AutoCAD drawing is embedded in a file, it can be re-opened with AutoCAD even after it was opened with another software. As in CAD systems, the DXF format is hierarchical. The following are the six basic components of a DXF file: The first line of a DXF file (Line 0) is the DXF header. This is followed by the drawing component block, which contains a list of objects and drawing information, as well as blocks and tags describing the objects in the drawing. Each object can be identified by an object ID. The drawing component block also contains properties of the objects and the objects' style, attributes, and a reference (reference ID) to other components. If an object is not on the same "plane" as its parent, it is defined as a child object. A DXF file can contain layers and clipping regions. These components are defined on the drawing component block. Each line contains the following components: There are two versions of DXF, the 1.01 and the 1.05 standard versions. Both versions support a great number of different element types and do not limit the use of line coordinates and distance values to arbitrary ranges. DWG A DWG (Drawing Interchange Format) file is a "component-based" drawing that uses multiple layers and is organized in component blocks, as in DXF. The DWG is an older format, superseded by the DXF format. Importing Importing a DXF file into AutoCAD can be done in the following ways: Double-clicking on a file opens it in the "Import Drawing" dialog. The dialog box appears as shown in the figure. The user has three choices in the "Import Drawing" dialog box: ca3bfb1094
