What is the difference in concept of linked list and queue in c++? A: A queue has an unlimited, fixed-size buffer (the "waiting queue"), while a linked list has no such buffer. This allows lists to be more efficient than queues, because they generally require only one pointer per node, but allow lists to have nodes that are arbitrarily far apart. So if your goal is maximum efficiency, you want a linked list. If your goal is maximum extensibility, you want a queue. If, however, you have a buffer full of data that must be sequentially processed and you don't care at what speed it gets done, then a queue is probably the right thing. Kahn-Tourian syndrome: cardiovascular, metabolic, and hormonal response to acute and prolonged endurance exercise. Kahn-Tourian syndrome (KTS) is a familial condition characterized by the development of hypertension in young people with initially mild hypertension, a positive family history of hypertension, and a predisposition to other cardiovascular risk factors. Hypertension and early-onset diabetes are the predominant features, and hypertension usually has a positive linear relationship with insulin resistance and obesity. KTS is one of the few forms of secondary hypertension that has a genetic basis. Two genes have been identified, the angiotensin I-converting enzyme gene, and the G protein that transduces insulin stimulation of insulin receptors. Two types of KTS have been described, the complete KTS, in which hypertension is usually present in early adulthood and in which hypertension and diabetes appear to arise from hypertension, and the incomplete form, in which hypertension occurs in late childhood or adulthood and in which the severity of hypertension is much less than that of complete KTS. KTS appears to be a gene-environment interaction in which genetic susceptibility leads to an increase in blood pressure and a switch to the expression of one or more cardiovascular risk factors. The main cardiovascular risk factors include hypertension, obesity, type II diabetes, and dyslipidemia. However, the blood pressure is not usually elevated in people with KTS, and the genetic susceptibility to blood pressure elevation could be more important than is currently appreciated.20150610 Category: Languages d0c515b9f4
