Let us now find the friction force coming from the non-diagonal terms of the matrices M_{ij} in Eq. (L). To study

this effect, we observe first that the divergence of the collision term

$$\frac{i}{\hbar} \text{Tr} \left[\frac{\partial}{\partial t} \left(\frac{1}{\hbar} \widehat{M}_{12} \left(f^0 \widehat{\mathcal{E}}^{\dagger}_{12}, \widehat{\mathcal{E}}_{12} \right) \right) \right]$$

is proportional to the terms

$$\frac{i}{\hbar} \text{Tr} \left[\frac{\partial}{\partial t} \left(\frac{1}{\hbar} \widehat{M}_{12} \left(\widehat{\mathcal{E}}^{\dagger}_{12}, \widehat{\mathcal{E}}_{12} \right) \right) \right]$$

$$\left(\frac{\partial f^0}{\partial \epsilon_{1,p}} - \frac{\partial f^0}{\partial \epsilon_{2,p}} \right) \text{onumber}$$

$$- \frac{i}{\hbar} \text{Tr} \left[\frac{1}{\hbar} \widehat{M}_{12}$$
