You can often find Photoshop tutorials on YouTube, too. Although Photoshop replaced the once much-heralded and popular MacPaint, it never quite displaced it as the premiere graphics editing program. That hasn't stopped MacPaint from making a comeback, as websites encourage both MacPaint and Photoshop to be used together, something you can easily do on a Mac. ## Creating a New Photo Project in Photoshop After you import a photo, the first step is to create a new photo project. A _photo project_ is a group of images that belong together and are selected for editing in Photoshop. You can think of a photo project as similar to a folder on a computer. All of the files inside that folder belong together and can be worked on as a group. You typically create a photo project when you start a new editing project. In this section, I walk you through the process of creating a new photo project from scratch. However, you can also use the new project to create a folder for all of your new photos. To create a new project, the process is relatively straightforward. To access all the new features of Photoshop CS4, you must upgrade to Photoshop CS5 and have an active Creative Cloud account. If you are using an older version of Photoshop, you can still access some of the new features, but they aren't active.

395 So.2d 412 (1981) STATE of Florida, Appellant, v. Donald Ray THOMPSON, Appellee. No. 80-2113. District Court of Appeal of Florida, Fourth District. June 16, 1981. Rehearing Denied August 6, 1981. *413 Jim Smith, Atty. Gen., Tallahassee, and Russell S. Bohn, Asst. Atty. Gen., West Palm Beach, for appellant. Richard L. Jorandby, Public Defender, and Tatjana Ostapoff, Asst. Public Defender, West Palm Beach, for appellee. PER CURIAM. We reverse and remand. The State of Florida (hereinafter "State") appeals an order dismissing the indictment against Donald Ray Thompson (hereinafter "defendant"). Defendant was charged with sexual battery and burglary. At the arraignment, defendant entered a plea of not guilty to the charge of sexual battery. The trial judge ordered a mental examination to determine the defendant's competency to stand trial, pursuant to Florida Rule of Criminal Procedure 3.210(b). Defendant was examined by two psychiatrists and by the court. Based on the report of the two psychiatrists, the court found that the defendant was mentally competent to stand trial. However, the court found that a third psychiatrist, appointed by the court, had not examined defendant in accordance with Florida Rule of Criminal Procedure 3.210(b) because the psychiatrist had examined the defendant only for competency. After the court ordered the third psychiatrist to conduct a mental examination, defendant filed a motion to dismiss the indictment which was subsequently granted. Florida Rule of Criminal Procedure 3.210(b) provides in pertinent part: If, prior to the trial, the court, of its own motion or upon motion of counsel for the defendant, or on its own initiative, shall have reasonable cause to believe that the defendant is not mentally competent to stand trial, the court shall order the defendant to be examined by no more than three (3) psychiatrists or three (3) licensed psychologists to be selected by the defendant or the state.... The rule mandates that a defendant be examined by psychiatrists or psychologists appointed by the court. The trial judge must find that "reasonable cause" exists before the examination of the defendant by a psychologist is proper. This determination may be made at any time during the proceedings. State v. Posey,

Q: Ruby Websocket - What is `#` hash? I have to write a WS client in Ruby that works with a server written in PHP. The only interesting bit of code looks like this: `def init_socket(url) return nil if url.nil? sock = TCPSocket.new(url, 80) sock.connect @sock = sock end` After looking through the source code of websocket-rails, I can see that: `def initialize(url, options = {}) @connection_url = url @headers = {} @opts = {} @encode_params = true if @connection_url init_socket(@connection_url) end end` There is this snippet of code, and I don't know what it means: `sock = TCPSocket.new(url, 80)` I understand that it creates a socket, but don't know where it's connected to and what's the difference between this one and this: `sock = TCPSocket.new('www.google.com', 80)` A: It means that you want to create a TCP socket that connects to url. 80 is just a port. You could connect to port 80 on a local host or you could connect to port 80 on a remote host. A: `sock = TCPSocket.new(url, 80)` This code is used to create a socket with TCP protocol, which connects to url, and it takes port number of 80 (by default). If you want to connect to google.com then it should be `sock = TCPSocket.new('www.google.com', 80)` Q: Easiest ways to handle GUI changes in Asp.Net MVC? I have been reading through a lot of posts about the topic of event handling in Asp.Net MVC and so far I have not found a practical example of how the event mechanism works in Asp.Net MVC. Basically I have a following setup: Page X (where user clicks a button to generate a file) In this page a file is generated. When user closes the file a different view Y is shown (next to the file generated) Then user
