Whether it's the smell of bacon or the look of the dashboard, we make cars look great, with one exception: The steering wheel. Often neglected due to its high price, the steering wheel can be an aesthetic. and can even be a safety feature: It makes steering easier and is well-suited for long distance drives. The appearance of the steering wheel has been studied for many years. However, little is known about its functionality. Even if it does not appear to be essential, the steering wheel is an important component of a car, as without it we couldn't control the car in any meaningful way. Indeed, many types of cars are completely controlled by the steering wheel, with hand-wheel steering being rare in modern vehicles. Since the steering wheel is our only connection to the car, it deserves special attention. Why steering wheels do not always work This is the question that we set out to answer. We conducted two studies of steering wheel types, one in 2016 and one this year. The cars used were an Audi A4, a Lamborghini Gallardo, a Mercedes E-Class, and a Volvo S60. In a first study, we used an experiment that measured how well we control the vehicle. The goal was to figure out how much of our control is actually transferred to the car and whether we can really control it. We kept the cars in the same locations on a course we know well, and we moved a steering wheel that had a working brake pedal. We measured the car's performance on a straight road, by hand, and over jumps, and compared the results with those obtained when we sat in the car. The experiment's results were surprising, as we discovered that we really can control the car, even though there are many things that we are not aware of and do not consciously control. The steering wheel in the car acts like a part of the cockpit. However, the steering wheel is a completely different entity than the central controls, so it is important that we connect the two properly. For this reason, we included a second experiment where we moved the steering wheel, brake pedal, and accelerator, to demonstrate that these controls actually work, and how they work. This second experiment involved five participants, one in each car. It showed how important it is to include this "modulator" in the experiment, as we discovered that the steering wheel has the power to override other controls and can be an important component of the car that we do not consider. The results show that we can indeed control the car

What's new in GameDevVR:

A.D. The year is 2160 and the world has been devastated. This is the era of ecological despair. Known for his trigger happy weapons and unparalleled firepower, General Axel U.K. Walker leads his private army in the "clean up" program to control the world's undesirables. His assistant, DCI Strickland, is constantly operating under threat. She's seen a lot and only her keen skills keep her alive. Their job is to hunt down the criminal elements of the world and destroy them. A thousand years into their mission, they come across Rion, a high-tech boy born with abilities unlike anything they've seen. When the enemy closes in he must resort to a desperate plan to escape them.Shocking new claims of ties between Donald Trump and Russia. "The Russian government, through its embassy in Moscow, was engaged in ongoing efforts during the 2016 Presidential campaign to communicate with at least the Trump campaign," Devin Nunes, chairman of the House Intelligence Committee said Monday. On Monday, Trump, who in an interview with The New York Times reiterated his claim that he never asked Comey to end the FBI investigation into former National Security Advisor Michael Flynn, told reporters that Comey told him three times that he was not under investigation for his ties to Russia. "He was very honest with me, very upfront," Trump said of Comey. "He said he wasn't under investigation. He said it so directly, it was such a non-story."Growth conditions and induction of sporulation by osmotic stress. II. Physiological and morphological changes in sporulating mycelia of Aspergillus niger. An early phase of development of Aspergillus niger MA 1919 in semi-solid Difco yeast extract-glucose medium consists of an age-related deterioration of growth rate in the outer zone close to the inoculum and an increase in oxygen consumption with increasing age of the culture. Culture humidity and addition of NaCl to the culture are not important factors determining the onset of sporulation. Optimum partial pressure of oxygen for sporulation has been inferred from O_2-uptake rate. When the culture is transferred to a sporulation medium, O_2-uptake rate of the mycelium is depressed at any age of the culture, whereas the rate of glucose consumption rapidly increases. About 60 min are needed after transfer for a full spore formation. During this period, sp

Multiplayer! As mentioned before, Spinstar has multiplayer! That's right, the game features competitive multiplayer, allowing you and your friends to compete on multiple difficulties as you try to unlock the top titles. So you can play online with real humans.Or bots? Who cares. Share with Friends You can share your high scores with your friends via the internet to see who reigns supreme, no matter where you are! From The Game Developers Blog:A world of possibilities After lots of improvements, feedback, and constant gameplay optimization, we've got some news for you! Here are just a few of the new features/options we've added. Auto-skip : Spinstar now has a "Auto-skip" feature, which can help you get through some of the more tricky levels, because it will skip the level. (NOTE : This can actually be a disadvantage, if the levels are so difficult that you find yourself repeatedly restarting the levels or beating them.) Scaled sprites : This is a very handy feature, because it means you can navigate any level in any device, to make sure it's exactly the right size. The scaling option is automatically remembered from game to game, or you can always use it. LIVEWIRE GAME SUPPORT : If you're using a smartphone as a second screen, you can now control some of the game functions from your phone by checking the "Additional Controls" option, and using the "Play on LiveWire" checkbox. UI : If you have an Xperia Z2, Xperia Z3, Xperia Z4 or Xperia Z5, and you are accessing the game on the Xperia Play app, you might notice that the UI has changed quite a bit. This option has been restored to how it was on the other devices. There's also a number of other bug fixes, including a few fixes to the game logic. Check out the full changelog for some of the other changes here. Play on LiveWire The Playstation Network (PSN) was once the leading online gaming platform on the market. Ever since the shutdown however, the internet has largely left the PlayStation Network - and has stayed away from online gaming platforms altogether, in fear of the business models employed by other online gaming platforms.
