1 dictionary (concordia. 10 janv. le texte est distribu.. 38 dictionnaires et recueils de correspondance crack or gen startimesQ: Can I use attribute of a function for a class or a setter function in xcode? I am trying to find if I can use the attribute of a function for creating a class and a setter function. Here is the case: I am building a class that consist of a property of type NSArray and I want to ensure that the count of this array is always greater than one. I can do this using a function like so: @property (nonatomic, retain) NSArray *myArray; -(void) setMyArray:(NSArray *)theArray { if (theArray.count == 0) { [theArray release]; theArray = [NSMutableArray array]; } else if (theArray.count == 1) { [theArray retain]; } if (theArray != nil) { [theArray release]; } [self setMyArray:theArray]; } But this is very redundant and prone to errors. Is there a better way to do the same thing? A: You can write a custom setter function that checks the count, and even use a default value if the count is zero, but I don't think there's a need to. - (void) setMyArray:(NSArray *) theArray { if (theArray == nil)

Radiotherapy (RT) alone has greatly reduced local control for head and neck squamous cell carcinoma (HNSCC). However, the combination of concurrent RT with chemotherapy (CCRT) has not markedly improved disease-free survival. Here, we reviewed the efficacy of CCRT versus chemotherapy alone in patients with HNSCC, and further tested whether the added RT benefit was retained in patients treated with CCRT. We systematically searched the PubMed, EMBASE, and Cochrane Library databases

for all relevant studies, including randomized controlled trials comparing CCRT plus radiotherapy (RT) vs RT alone. Outcomes reported included overall survival (OS) and disease-free survival. Subgroup analyses explored the effects of several potentially relevant factors. Nine studies (n = 1713) with eight comparisons and nine comparisons were included in the systematic review and meta-analysis, respectively. In patients treated with RT alone, 2-year OS was 69.6% and 2-year disease-free survival (DFS) was 54.4%. In patients receiving CCRT, OS was 78.1% and DFS was 70.9%. Based on fixed- and random-effects models, significant improvements in OS (HR, 0.56; 95% CI, 0.47-0.67; P = 0.000) and DFS (HR, 0.73; 95% CI, 0.63-0.87; P = 0.000) were identified in patients treated with CCRT compared with RT alone. Subgroup analysis revealed that the significant improvement in OS was also observed in patients who received RT with CCRT compared with those who received RT alone. The potential benefit of CCRT was also identified in patients treated with RT only or with chemotherapy plus either cisplatin or taxane or RT combined with

the two. These data indicate that the routine use of CCR 6d1f23a050
